搜索

通过简单、直观的操作即可在nature.com上找到所需信息

可以使用“高级搜索”选项使搜索更具体。详情请参考下一页幻灯片

搜索框位于所有期刊页面的右上角

The image shows a screenshot of the Nature.com website's search interface. At the top, there is a navigation bar with a "Menu" dropdown, the "nature" logo, and links for "Subscribe", "Search" (with a magnifying glass icon), and "Login" (with a user icon). Below the navigation bar, the "Article Search" section is highlighted with a yellow border. It contains a search input field with the placeholder text "Search by keywords or author" and a "Search" button. Below the search input, there is a link for "Advanced search". At the bottom of the highlighted section, there is a "Quick links" section with four links: "Explore articles by subject", "Find a job", "Guide to authors", and "Editorial policies". Two callout boxes with arrows point to specific elements: one points to the "Advanced search" link, and the other points to the "Search" link in the navigation bar.

Consumer acceptance of novel food technologies

Michael Siegrist & Christina Hartmann

Nature Food 1, 343–350(2020) | [Cite this article](#)

1510 Accesses | 35 Altmetric | [Metrics](#)

Abstract

Novel food technologies are important for food security, safety and sustainability. Consumers, however, are often hesitant to accept them. In this narrative Review, we organize the research describing how heuristics and individual differences among consumers influence the acceptance of agri-food technologies. Associations evoked by a food

Online attention

● 46 tweeters ● 2 blogs

This article is in the 93rd percentile (ranked 11,126th) of the 166,183 tracked articles of a similar age in all journals and the 66th percentile (ranked 6th) of the 18 tracked articles of a similar age in *Nature Food*

Altmetric calculates a score based on the online attention an article receives. Each coloured thread in the circle represents a different type of online attention. The number in the centre is the Altmetric score. Social media and mainstream news media are the main sources that calculate the score. Reference managers such as Mendeley are also tracked but do not contribute to the score. Older articles often score higher because they have had more time to attract attention. To

Nature.com is home to Nature-branded research and review journals, Nature Partner Journals, academic journals, and Nature News and Comment.

This guide will help you navigate the homepage as well as use our search and registration functionality.

The story behind the image

Antarctica meltdown could double sea level rise

Researchers at Pennsylvania State University have been considering how quickly a glacial ice melt in Antarctica would raise sea levels. By updating models with new discoveries and comparing them with past sea-level rise events they predict that a melting Antarctica could raise oceans by more than 3 feet by the end of the century if greenhouse gas emissions continued unabated, roughly doubling previous total sea-level rise estimates. Rising seas could put many of the world's coastlines underwater or at risk of flooding and storm surges.
